Step 2 - Cutting Process

Apply a small amount of cutting compound (Application A) on the polishing cloth and start buffing, make sure to keep the cloth moving over the affected area at all times. Put enough pressure and make sure to spend enough time during the cutting process.

Step 3 – Polishing Process

Once damage is removed and all marks are gone, apply small amount of polishing compound (application B) on the polishing cloth and start buffing, make sure to keep cloth moving over the area where Cutting compound A been used. Please pay extra attention to the edges of the working areas. Put enough pressure and make sure to spend enough time during the polishing process.

Step 4 - Finishing Process

Continue polishing move slowly from left to right, up and down until the slurry is dry, then add more compound and repeat this process as many times as necessary until surface is clear. Wipe the surface clean and inspect carefully, the surface should now be crystal clear.
